

## ENVIRONMENTALLY FRIENDLY HULL CLEANING

# Save time and money...

During your stay in Hundested why not get an environmentally friendly hull cleaning. By reducing the frictional resistance of the hull, fuel consumption and CO2 emissions are reduced, which is beneficial to both the ship's economy and the environment.

Port of Hundested and Mermaid Marine Service offers Underwater Hull Cleaning with our patented eco-friendly water powered hull cleaning system, which collects and filters all brushed off fouling. The brushes used, have been specially designed for use on all types of coatings, including silicone paint, without damaging the paint surface. Our Hull Cleaning system can be used in-port, as it is ecologically harmless.

**In-Port hull cleaning offers great savings to shipping companies.**
